Introduction to Materials Management

Seventh Edition

J. R. Tony Arnold
Stephen N. Chapman
Lloyd M. Clive

The primary reference for the APICS certification courses Basics of Supply Chain Management and Detailed Scheduling and Planning, this unique text provides complete and concise coverage of supply chain management. The fundamental approach fully explains all information and does not require the support of other textbooks. The text begins by introducing the supply chain concept and gradually progresses through the planning and control of goods and components. The material remains basic in its roots but includes modern practices of quality and production inventory management with coverage of Just-in-Time, Kanbans, ISO 9000:2000, Global Transportation, and Total Quality Management.

Summary, Key Terms, and Review Questions focus study on the key concepts of each chapter. Case Studies are a proven pedagogy for learners to reinforce their lecture and lesson material. Examples and solved problems make this text beneficial to students who are studying outside of a traditional, instructor-led class.

New to this Edition

- All chapters have been updated to reflect new techniques and technology.
- Case studies added to Chapters 2: Production Planning System, 9: Inventory Fundamentals, and 14: Products and Processes.
- Re-organized content to emphasize Lean Production separate from, but related to, JIT.
- Extensive updates to Chapter 15: Just-in-Time Manufacturing and Lean Production.
- End-of-chapter problems have been altered.
- Addition of information on sustainability and “green” production.
